Feedback from tutor. Summative assessment 2: System Implementation

The code is presented well and contains a good level of comments. You have made your intentions for the code to be clear. However, a large number of the comments are explaining what the code does rather than why you have made those choices. It's important to document your thinking when writing the code. It's useful for other developers and future you!

There is a good use of some elements of object oriented development that demonstrates a good level of understanding.

The ReadMe file mentions testing and test data however, I can only find the occasional assert statement in some bits of the code. It would be good to create a separate suite of tests that can be run each time.
